

Changes in modern healthcare demand new and extended analytics. Organizations can no longer be satisfied with merely tracking operational information. Efficacy of care and cost efficiencies are the new standards for healthcare. Dynamic decisions cannot be based on rigid transactional systems and static reports.

In addition to expanded analytics requirements, the Affordable Care Act is driving a new emphasis on the consumer. Payers and providers are looking for ways to push content to new millennial-friendly technologies. Organizations are looking for cost effective solutions to help them reach out to this market quickly.

Time to market is fast becoming the single most important consideration for healthcare organizations. The fast changing technical climate, matched with the dynamic nature of today's healthcare delivery, is driving organizations to look for ready-made solutions and accelerators for custom deliveries.

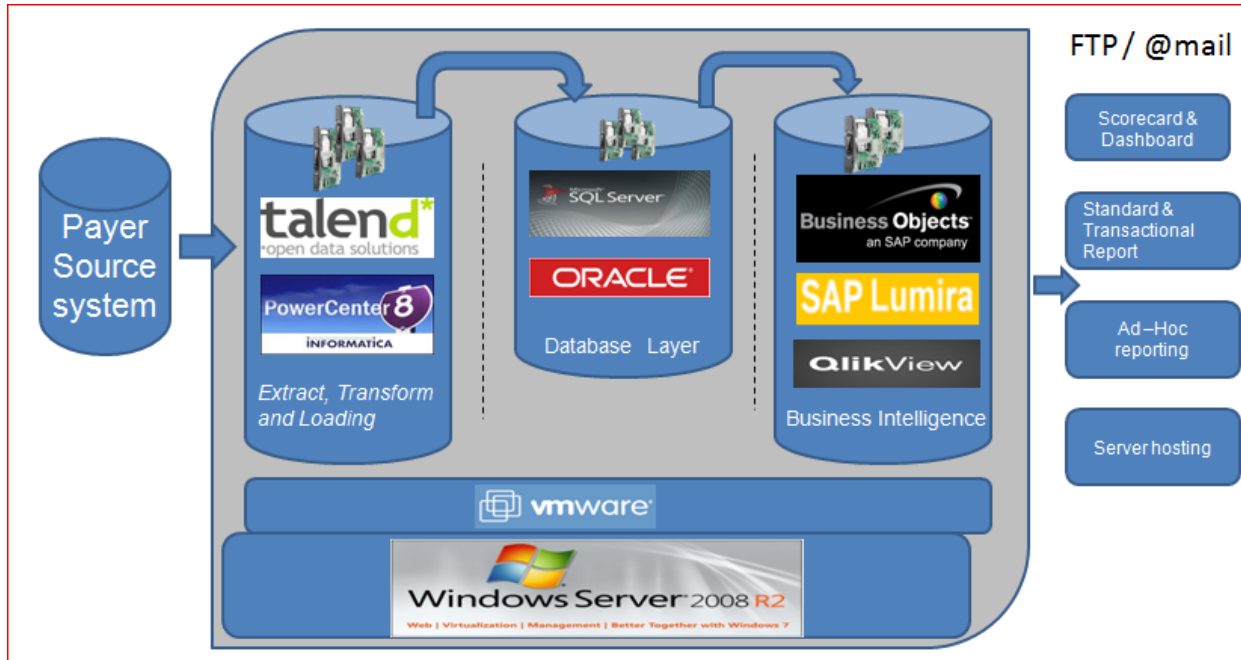

PlatinoTech offers solutions that represent off the shelf ease of delivery paired with customization capabilities to drive the answers to new healthcare demand. By providing highly extensible, yet production-ready solutions, payers and providers can speed to market these solutions, while building out custom requirements.

BI-In-A-Box

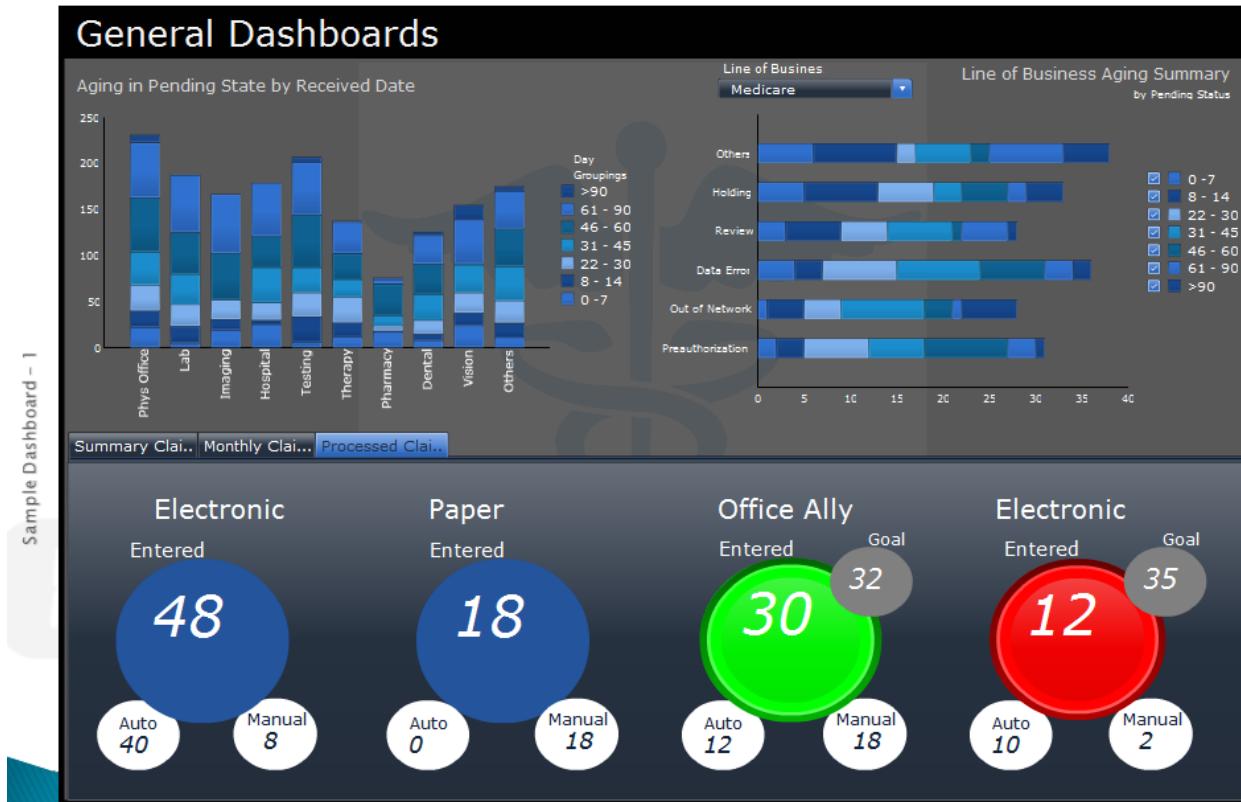

Taking your business to the next level...

For some time, integrated data sources (data warehouses) have driven decision-making and operational KPI management. Design, development and maintenance of data warehouse environments are expensive activities. Too often significant money is expended for projects that never complete, never provide any ROI. PlatinoTech's BI-in-a-Box expedites the availability of analytics by providing off the shelf capabilities.

The BI-in-a-Box solution provides the best standard of analytics appliance. All hardware and software costs are included in the solution, guaranteeing no surprises to the customer. Hardware/software licensing and maintenance are taken out of the customer's hands, significantly reducing initial and on-going risk.

After initial installation, content associated with the source is readily available for operational and analytical perspectives. A set of pre-built reports are included in the initial deliverable with the option of development of custom reports.

Dashboard design allows for “What if” analysis in addition to operational reporting. Understand how changes in metrics can affect the overall efficiency of the organization by flexing the dashboard.

Healthcare going Mobile

Healthcare at your finger tips...

Healthcare for the Millennial

Consumers today expect to “have an app for that”. This doesn’t exclude healthcare content. PlatinoTech has brought together multiple small applications into a user friendly mobile interface. The individual applications can easily be combined and branded by the customer.

The time is now to address the new consumerism that is taking over healthcare. PlatinoTech is addressing this through an extensible mobile framework.

A variety of information is at the consumer/patient’s fingertip. Where is the nearest doctor with the specialty I am looking for? What are the comparative costs by doctor for the procedure I need? How much deductible is remaining on my plan? What are my benefits?

Do I have options for the labs I need? How new is the equipment by lab? When did I last have this test? How do my newest results compare?

Healthcare consumers can now shop for the services they need based on multiple categories. The PlatinoTech mobile framework accommodates extensibility developed for organizations custom requirements. Add or remove the components as desired, providing multiple delivery options for resale.

PlatinoTech’s development trajectory includes payer, provider and clinic resale options.
